Executive Summary {#executive-summary}

This proposal is for WEDE5020 POE Part 2. I chose Joe's Plumbing because my uncle is a plumber in Mbombela and he loses customers because he has no website. I will build 5 simple pages using only HTML5 to show his services and phone number.

Proposal 1: Joe's Plumbing Services {#proposal1}

****Organization Name:** Joe's Plumbing Services**

****Brief History:**** Joe's Plumbing is a small family business run by my uncle in Mbombela. He started in 2014 with one bakkie. He fixes geysers, leaking taps and blocked drains for people in Kanyama Zane and around Mbombela. Right now all his customers come from people telling each other about him.

****Mission Statement:**** To give honest, affordable plumbing help to families in Mbombela.

****Target Audience:****

Homeowners in Mbombela who need a plumber fast. They use their phones to search and need a number to call.

Website Goals and KPIs {#goals-kpis}

****Specific Goals:****

The goals of the Joe's Plumbing Services website are directly linked to the purpose stated. These goals focus on making the business visible, trustworthy, and easy to contact for homeowners in Mbombela.

1. Display Contact Information clearly: the phone number and "call now" button will be visible at the top of every page so customers can reach Joe quickly.
2. List Services Clearly: The Services page will present drain cleaning, leak repairs, water heater installation, and emergency service using short descriptions and icons.
3. Build Credibility: The products page will display 3-4 real photos of completed jobs to show the quality of work and build customer trust.
4. State Service Area: The website will clearly state that services are available in Mbombela, Kanyama Zane, and surrounding areas.
5. Ensure Mobile Usability: All 5 pages will be designed to be readable and usable on mobile devices without horizontal scrolling.

Key Performances Indicators

KPI	Target	Measurements Method
Contact Visibility	Phone number visible within 3 seconds on mobile	Use a stopwatch to test on 3 different mobile phones
Navigation Success	100% of navigation links and footer links work	Click through every link manually and record results
Content Completeness	All 4 services listed with a description	Checklist against client requirements
Mobile Usability	No horizontal scrolling buttons are tap-friendly	Test using Google Mobile-Friendly test and manual check
Load speed	Pages load in under 4 seconds on 3G connection	Test using Google Page Speed insights

Purpose

The purpose of this website proposal is to create an online presence for Joe's Plumbing Services, a small family plumbing business operating in Mbombela since 2014.

Currently, the business relies only on word of mouth and does not appear when potential customers search for "plumber Mbombela" online. This makes it difficult for new residents and homeowners in Mbombela and Kanyama Zane to find and contact Joe for urgent plumbing work.

The website will solve this by providing a 5-page, mobile-friendly site built with HTML5. It will display the business's services, contact number, service area, and photos of completed jobs to build trust and make it easy for customers to reach out.

Objectives

The following objectives are SMART and support the purpose of the website. They are to be achieved within 4 months of the website going live:

1. Increase Online Visibility: Ensure Joe's Plumbing Services appears in the top 5 results when searching "plumber Mbombela" on Google.
2. Improve Contact Access: ensures 90% of mobile users can find the phone number and "call now" button within 15 seconds of opening the site.
3. Build Customer Trust: Display 3-4 real photos of completed jobs so that 70% of users rate the business as trustworthy after viewing the site.
4. Capture Emergency Jobs: Provide a working contact form and "call now" button accessible on all pages for anytime requests.

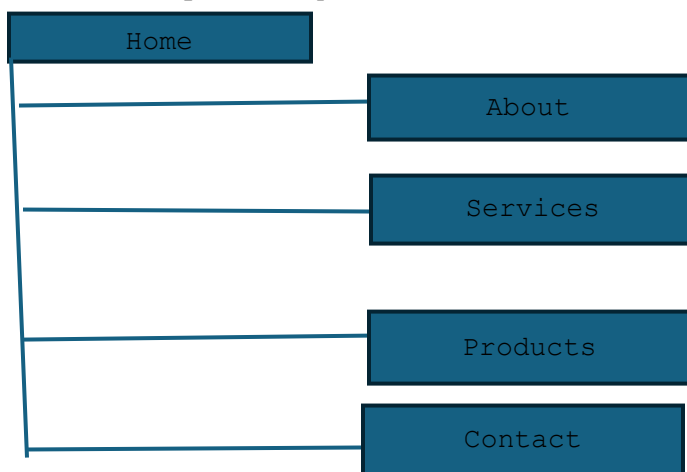

Evaluation Criteria

Objective	Evaluation Method	Success Criteria
1. Increase visibility	Manual Google search test with 5 Mbombela residents	Business appears in top 5 results
2. Improve Contact Access	Usability test on mobile phones with 5 target users	4 out of 5 users find contact info in <15 seconds
3. Build Trust	Short feedback survey after viewing the product section	70% of users rate trust 4/5 or higher
4. Capture Emergency Jobs	Test all "call now" buttons and contact form submissions	All links work, form submits without errors

Additional Technical Evaluation:

All pages will be tested on Chrome, Firefox, and mobile devices for broken links and layout issues. The site will be tested using Google's Mobile-Friendly Test and Page Speed insights to ensure load time is under 4 seconds on 3G.

Low Fidelity Sitemap

This sitemap shows the 5 pages proposed for the website.

Current situation:

Joe's Plumbing has no website at the moment. He doesn't use Facebook or WhatsApp business. Problem: When someone new moves to Mbombela and searches "plumber Mbombela", they don't find him. He only gets calls from old customers. A basic 5 page website will fix this by putting his name and number online.

Proposed Features and Functionality {#features}

- 1.index.html - Home: Business name, photo, "call joe now" button with his number.
- 2.about.html - About: 2 sentences about joe starting in Mbombela.
- 3.services.html - services: Drain cleaning, leaks and repairs, water heater installations, emergency service.
- 4.products.html - products: shows photos of common parts Joe uses like taps, pipes, and geysers. This helps customers see what parts look like before they call. Display prices for info only, no checkout.
- 5.contact.html - contact - His phone number and a basic form with Name + messages.

Design and User Experience {#design-ux}

Color Scheme: Dark blue #1E40AF for headers because blue means water and trust. White background so it's easy to read.

Typography: arial, size 16px. Big buttons so people can tap them on phones.

Layout: Header with name + phone, navigation bar, content, footer with number again. No animations or sliders.

Low Fidelity Wireframes {#wireframes}

```
<div class="diagram">
```

```
**Home Page:**
```

```
```\n
```

```
[Fixed Header: Logo | Nav Links]

[Footer]
```

</div>
```

****Unique Features:**** service area, emergency badge.
****Tech Stack:**** HTML5.

****Unique Features:**** service area, emergency badge.
****Tech Stack:**** HTML5.

```
### Technical Requirements {#technical}
**Hosting and Domain:**
- **Hosting:** GitHub pages. Free hosting for student projects.
- **Domain:** I will use the free link GitHub gives me like
  mahlodim.github.io/joesplumbing.

**Programming Languages/Frameworks:**
1. Frontend: HTML5 only
2. no frameworks, no JavaScript, no libraries.
3. This matches what we learned in WEDE5020 classes.
```

Budget Estimate {#budget}

Total cost: R0

This is an academic project for WEDE5020. I used free tools:

- 1.VS Code: Free
- 2.Github Pages: Free hosting
- 3.Photos: free images downloaded from unsplash.com I did not pay for a domain name or designer.

(Proposal 1 Word count: 625

Development Timeline {#timeline} 1.

Week 1: draw wireframes on paper.

2. Week 2: Code index.html and about.html

3. Week 3: code services.html, product.html, contact.html

4. Week 4: testing, check spelling, zip files and submit.
